

# WHY?

# Reliability vs. Agility

Software is vital to our society  $\Rightarrow$  Software must be reliable

Traditional Software Engineering  
Reliable = Software without bugs

Today's Software Engineering  
Reliable = Easy to Adapt

Striving for  
RELIABILITY

(Optimise for  
*perfection*)

Striving for  
AGILITY

(Optimise for  
*development speed*)

Eclipse\* (E\*) and Struts\* (S\*) denote recommended changes, that is changes that will become breaking changes in future releases. Those changes in italic font (upper half of the table) are refactorings.
